

Because you can never be too careful...

When it comes to safety footwear, no manufacturer can afford to compromise on quality.

That's why more and more producers of ESD footwear are choosing to specify Cambrelle® Conduct for their boot and shoe linings.

In tests carried out by SATRA, Cambrelle® Conduct was found to have an average electrical resistance of less than 10 k ohms, making the lining fully compatible with safety boots compliant with European Standard EN344-1. It also possesses all the legendary abrasion resistance and wicking properties that make Cambrelle® the world-beater that it is today.

So don't take chances. For an electrically conductive footwear lining that's comfortably ahead of the rest, specify Cambrelle® Conduct.
